

Modena Braille Bollard

Model Number

MBB-37

This bollard is the result of a request from a community looking to have their streets and intersections be more accessible and inclusive for the visually impaired. The flat top was used in this application for a braille inscription (see installation gallery). This simple design also incorporates recycled plastic lumber on the sides to coordinate with other street furnishings. Upon completion, we decided that the straightforward design was a real winner, and included it in our available product line (with or without braille inscription of course!)
