

Urban Form Self Watering Rectangular Planter

Model Number

UFSW-58R
UFSWAL-58R (All Aluminum)

For communities looking to beautify an area and cut down on maintenance costs, the Urban Form self-watering planter is the answer. Designed specifically to deal with the challenges associated with typical planters, this model saves time and money through its innovative features. The Urban Form Self-Watering Planter saves up to 80% in water consumption through a unique bottom feeding method, requiring only minimal watering in normal to dry weather conditions. The built-in overflow drain ensures the water level is perfect even in heavy rains.

Like the other products in the Urban Form series, the horizontal tongue-in-groove lumber design provides a finished look and also allows for easy replacement of any board by simply removing the top edge cover. The entire unit can also be easily moved by forklift due to the slots on the underside.
